Combination according to your needs

When it is desired flexibility and maximum hygiene in the farrowing stall, we can offer solutions with fully drained floor. Our plastic slats system is a particularly flexible slats system, where modules are made of 100% PP-plast or cast iron and can be combined entirely according to your needs.

Easy to clean

Manure passage and easy cleaning are secured, as the slats have the same profile as our proven cast iron slats.

Comfortable for both sow and piglets

Plastic is warm and hygienic for the piglets, while the sow, where the load is the highest, has the benefit of the cooling and anti-slip properties of cast iron slats. Combine for ex. with unique drain plate made of cast iron under the sows shoulders to prevent compression damage. Large bearing surface and good thermal conductivity of the drain plate reduce the risk of compression damage and shoulder sores.

Strong fiber glass support

Suitable for long farrowing pens

- Unique fiber glass profile
- Highly torsion-resistant
- High loading capacity

Top health conditions

- Slightly rough surface makes the slat slip-resistant
- T-shaped ribs ensures optimum manure passage

Minimum working time consumption

- Large cleaning opening
- Hard surface and minimum surface area

Environment and economy

- Long lifetime - good for both environment and economy!
- Same bearing surface and height as triangle slats, that can easily be replaced
- Self-supporting = low mounting costs
- Little surface = low emission

Our cast iron slats are specially designed to fit the cover rib. Can easily be mounted by means of allen wrench.

Cast iron slats has the same bearing surface and height as for ex. triangle slats, that can easily be replaced.
